ASSIGNMENT-1

Student Name: SHRESHTA

Semester: 6th

UID: 23BAI70375

Date of Performance: 01/03/26

Branch: BE CSE AIML

Subject Name: FULLSTACK-II

Section/Group: 23AIT_KRG-G1

Subject Code: 23CSH-382

AIM:

EcoTrack Feature Ticket — “Daily Water Tracker”

You are a frontend developer at EcoTrack. The product team wants a small wellness feature added to the dashboard.

Build a **Water Intake Tracker** inside a React app.

The user should be able to track how many glasses of water they drink today.

OBJECTIVES:

Create a dashboard page where a logged-in user can:

- navigate to tracker
- increase/decrease water count
- save daily goal
- fetch a health tip from API
- prevent unnecessary re-renders

c) Remove glasses

Dashboard Water Tracker Logout

Water Tracker

Keep track of your daily water intake and stay hydrated.

Daily Water Tracker

Track how many glasses of water you drink today.

6

6 / 8 glasses completed

+ Add - Remove

Reset

Daily goal (glasses): 8

6 / 8 glasses completed

d) Setting Daily goal/When No. of glasses $\geq$ goal

Dashboard Water Tracker Logout

Water Tracker

Keep track of your daily water intake and stay hydrated.

Daily Water Tracker

Track how many glasses of water you drink today.

7

7 / 6 glasses completed

Goal Reached

+ Add - Remove

Reset

Daily goal (glasses): 6

7 / 6 glasses completed

LEARNING OUTCOMES:

1. Develop a React-based dashboard feature using component architecture, state management (Hooks), and event handling.
2. Implement authentication, API integration, and dynamic data handling within a frontend application.
3. Optimize React application performance by preventing unnecessary re-renders and applying conditional rendering techniques.
